Computer Setup - Mac

The following software needs to be installed on the student computers.

Will the students have permissions to run sudo commands if we run into configuration issues, or if they need to install additional software?

Software	Version
Homebrew	We will need homebrew to install git, and the github credential manager https://brew.sh/
Git	Git can be installed either from the default installer the first time a git command is executed, or we can use homebrew to install it. https://formulae.brew.sh/formula/git#default
Git Credential Manager	GitHub works well with the git-credential-manager. This way we will not have to have the students walk through creating SSH keys in github https://formulae.brew.sh/cask/git-credential-manager#default
VS Code	Visual Studio Code https://code.visualstudio.com/download
NodeJS	NodeJS (Latest LTS) https://nodejs.org/en/download
